DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group II, claims 20-34 in the paper filed 10/8/03 is acknowledged.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 20-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Holmes et al (6375889) in view of Groitzsch et al (2002/0034907).

Holmes is concerned with the creation of a composite fabric comprising a microcreped nonwoven web entangled with a combination of cellulosic fibers and thermoplastic polyester fibers (abstract, col. 2, lines 1-5). Holmes fails to teach the thermplastic fibers to be splittable multicomponent fibers.

Groitzsch is concerned with the creation of a microcreped nonwoven webs (abstract). Groitzsch teaches the use of splittable multicomponent polyester fibers having applicant's claimed shapes (paragraph 21). It would have been obvious to a person having ordinary skill in the art to utilize the splittable fibers of Groitzsch in the fabric of Holmes. Such a combination would have been motivated by the desire to create a more "voluminous" fabric having the superior water handling capabilities and superior softness associated with fine denier fibers.

Art Unit: 1771

Holmes teaches staple fibers (col. 3, lines 33-35). It would have been obvious to the skilled artisan to vary the length of the stable fibers based on desired properties.

The fabric of Holmes is mechanically stretched by about 25% (col. 1, lines 38-45).

Holmes teaches hydroentangling (col. 2, lines 15-16).
